Driving Research Breakthroughs

Susan G. Komen® is leading the way in the fight against breast cancer, driving innovation and funding more breast cancer research than any other nonprofit outside the U.S. government.*

As part of our comprehensive, 360-degree approach to fighting this disease across all fronts, we are funding lifesaving research, advocating for compassionate public policy, offering treatment assistance for patients, providing trustworthy breast cancer information, and ensuring patient support every step of the way.

Today, we are leveraging our leadership position to focus increased research attention on metastatic breast cancer, eliminating disparities in outcomes, and advancing the use of technology to improve patient care and save lives.

We are funding innovative studies to develop new ways to detect, treat and ultimately cure all forms of breast cancer. This work is guided by patient advocates and the world’s leaders in breast cancer research. Here is a snapshot of how Susan G. Komen is advancing research.

ON ANY GIVEN DAY:

More than 200 Komen-funded research teams across 11 countries are working to end breast cancer.

More than 80 Komen-funded research labs are studying metastatic breast cancer.

More than 13,000 healthy women have donated blood samples to the Komen Tissue Bank, helping scientists worldwide transform breast cancer research.

More than 110 new breast cancer treatments are being discovered and tested – 54 of these for triple negative breast cancer, which needs better treatment options.

More than 25 Komen-funded projects are identifying and testing new approaches to reduce breast cancer disparities.

More than 200 patient advocates are working to ensure the patient perspective is included in ongoing Komen-funded research and Komen-funded research programs.

67 world-leading scientists and advocates are guiding and prioritizing Komen’s research investment.

63 new biomarkers are being discovered and tested to help diagnose people and tailor personal treatment strategies.

*Funding since 1982 as compared to all nonprofits outside the U.S. government
